

HIGHLIGHTS

OPERATIONS

- Gold production for the Dragon Mining Group of 16,041 ounces at an average cash cost of US\$936⁽¹⁾ per ounce.
- At Svartliden, Sweden gold production of 9,690 ounces at an average cash cost of US\$729⁽¹⁾ per ounce which includes US\$147 of waste mining costs associated with cutbacks to the open pit.
- At Vammala, Finland gold production of 6,351 ounces at an average cash cost of US\$1,252⁽¹⁾ per ounce.
- At Orivesi, Finland development of the Kutema Deeps decline from the 720m level which commenced in January 2011 and advanced 234m in the quarter (920m in total) and had reached the 850m level by the end of March. Lateral development advanced 374m for the quarter (1,164m in total) and development drives have extended to ore on all levels between 720m and 800m resulting in 11,883 tonnes of development ore being mined at an average grade of 4.6 g/t gold.
- At Jokisivu, Finland development of the decline advanced to 1,378m (210m vertical depth). Lateral development advanced 696m for the quarter (5,009m in total). The first stoping ore was mined and processed during the quarter.
- At Svartliden, the decline advanced 260m for a total of 758m and is progressing according to schedule and budget. Mining of development ore from the 345m level commenced.

EXPLORATION

Orivesi, Finland

- Results from an underground diamond core drilling program that targeted the Sarvisuo West area between the 640m and 720m levels returned a series of high grade intercepts, including **6.15m @ 5.86 g/t gold**, **3.70m @ 92.48 g/t gold** and **3.00m @ 9.72 g/t gold**.

Kuusamo, Finland

- The first results from the eighth phase of diamond core drilling at Juomasuo has yielded a series of extremely encouraging intercepts including **7.20m @ 8.76 g/t gold**, **4.80m @ 4.70 g/t gold** and **10.20m @ 9.53 g/t gold**, which confirm that mineralisation extends below and along strike from identified lodes at grades commensurate with the upper portions of the deposit.
- Final results from the seventh phase of diamond core drilling at Juomasuo yielded an intercept of **4.10m @ 6.64 g/t gold** highlighting the possibility of a further steeply dipping gold bearing zone 100 metres to the east of the main lode set.
- All assays have been received for the diamond core holes drilled at and in the vicinity of the Hangaslampi deposit since the recommencement of exploration. Better intercepts received from the 50 holes completed include **2.55m @ 156.90 g/t gold**, **6.85m @ 9.04 g/t gold**, **5.90m @ 3.47 g/t gold**, **7.20m @ 3.23 g/t gold**, **5.00m @ 3.40 g/t gold**, **12.45m @ 7.15 g/t gold**, **6.00m @ 7.51 g/t gold** and **9.00m @ 30.17 g/t gold**.
- Results were received from a 7 hole campaign of drilling at the Pohjasvaara deposit, yielding a best intercept of **3.45m @ 20.60 g/t gold**.
- Metallurgical test work advanced with samples from the Juomasuo and Hangaslampi deposits dispatched to ALS Ammtec laboratory in South Australia

Svartliden, Sweden

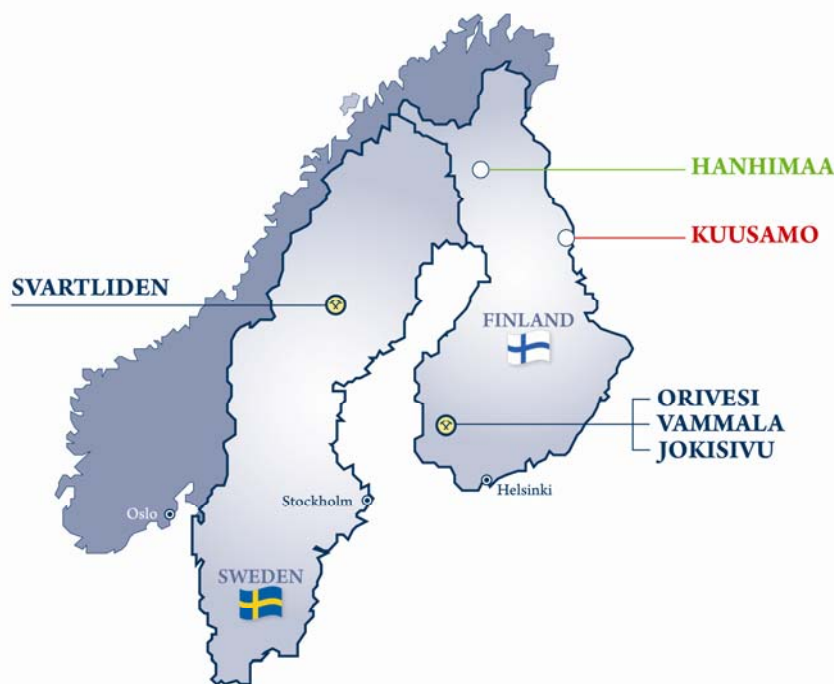

- All results have been received for a diamond core drilling program to better define the lower lens of mineralisation in the western portion of the Svartliden deposit. The program returned intercepts of **6.00m @ 4.22 g/t gold** and **5.00m @ 4.86 g/t gold** from the lower lens and **15.00m @ 4.70 g/t gold**, **5.00m @ 4.80 g/t gold** and **4.00m @ 14.24 g/t gold** from the North Lode.

CORPORATE

- An underwritten renounceable pro rata rights issue to shareholders was completed at an issue price of \$1.10 per share raising \$15.0 million before underwriting fees and expenses. The proceeds will be primarily used to advance exploration and metallurgical testwork at the Kuusamo Gold Project to enable feasibility studies and development to progress at a more rapid rate and for exploration on Kussamo regional prospects.
- As at 31 March 2012, Dragon Mining held \$25.6m in cash, \$4.9m in net gold concentrate receivables and bullion and \$4.1m in a cash deposit lodged with a Swedish authority as a rehabilitation bond.
- The average cash price received per ounce of gold sold (8,080 ounces) from Svartliden was US\$1,606 and the average sales price received per ounce of gold sold (6,202 ounces) from Vammala was US\$1,516.
- Net cash inflow from operations after exploration spend of \$3.0m for the quarter was \$1.3m.

Note (1): Cash cost per ounce of gold produced is calculated as costs of production relating to gold sales excluding gold in circuit inventory movements divided by gold ounces produced.

OPERATIONS

SWEDEN

Svartliden Gold Mine

Table 1 – Production Summary

	Ore Mined (t)	Ore Milled (t)	Head Grade (g/t)	Recovery (%)	Plant Utilisation (%)	Total Gold Production (Ounces)	Cash Cost US/oz
Mar 2012 Quarter	71,616	73,474	4.4	92.6	96.3	9,690	729
Dec 2011 Quarter	34,966	71,195	4.3	93.2	98.0	9,110	966

There were no lost time injuries during the quarter.

Svartliden produced 9,690 ounces of gold from 73,474 tonnes of ore milled at an average head grade of 4.4 g/t gold and a cash cost of US\$729 per ounce. The cash cost includes US\$147 per ounce of cutback costs (all open pit waste mining costs are expensed and included in cash costs).

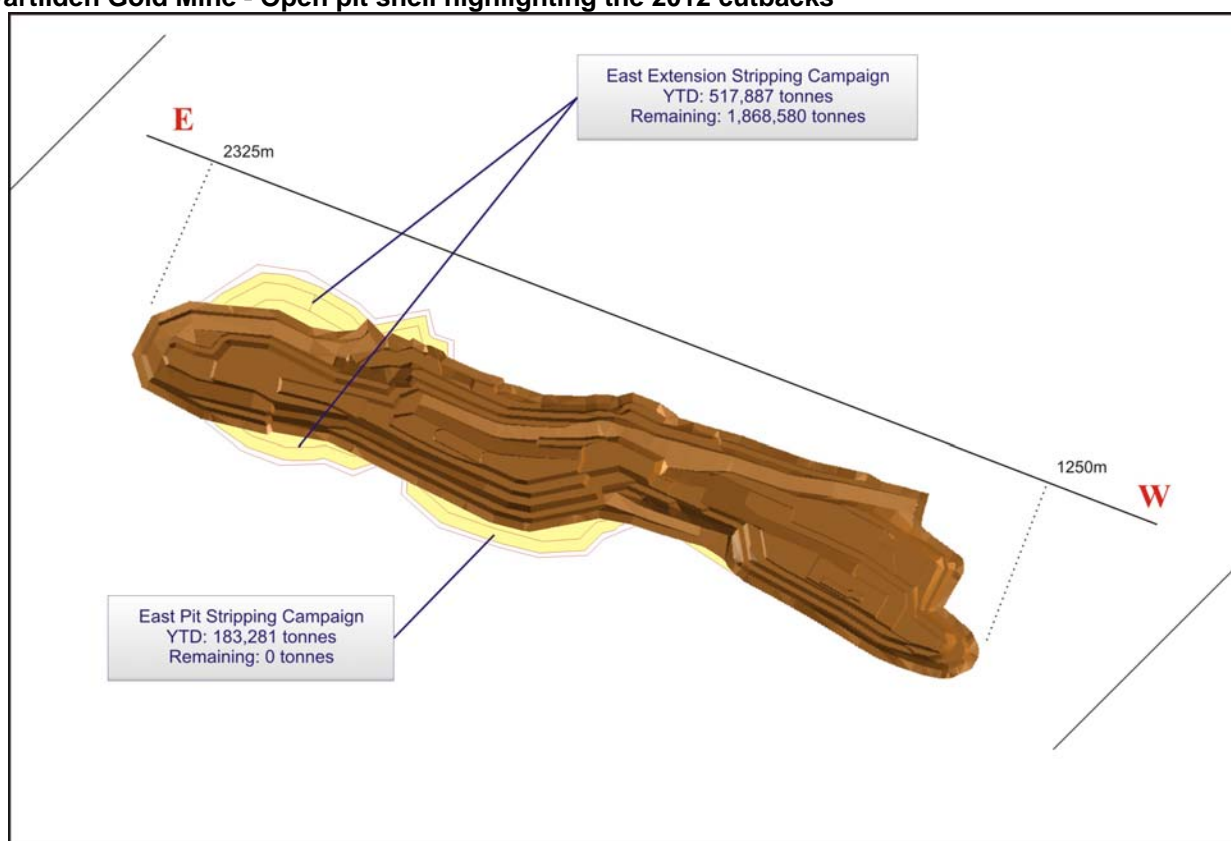

42,887 tonnes of ore milled was from the open pit at 5.4 g/t gold and 17,619 tonnes at 3.1 g/t gold of development ore from the underground. To maintain full production, 12,968 tonnes at 2.6 g/t gold were processed from the low grade stockpiles.

Gold recovery was at an acceptable level of 92.6% and the process plant utilisation was 96.3%.

Svartliden Open Pit

42,834 tonnes at an average grade of 5.0 g/t gold was mined from the open pit. 701,169 tonnes of waste was mined at a waste to ore ratio of 16.4:1.

Svartliden Gold Mine - Open pit shell highlighting the 2012 cutbacks

The commissioning of the water treatment plant to treat process water which has accumulated in the tailings dam to remove heavy metals and reduce nitrogen levels to enable discharge into the Clear Water Dam in accordance with the Environmental Permit was continuing. The commissioning phase has been slower than anticipated due to the slow growth of bacteria critical for the process and will continue into May 2012. The water treatment plant represents a substantial and material commitment to the long term rehabilitation of the operation.

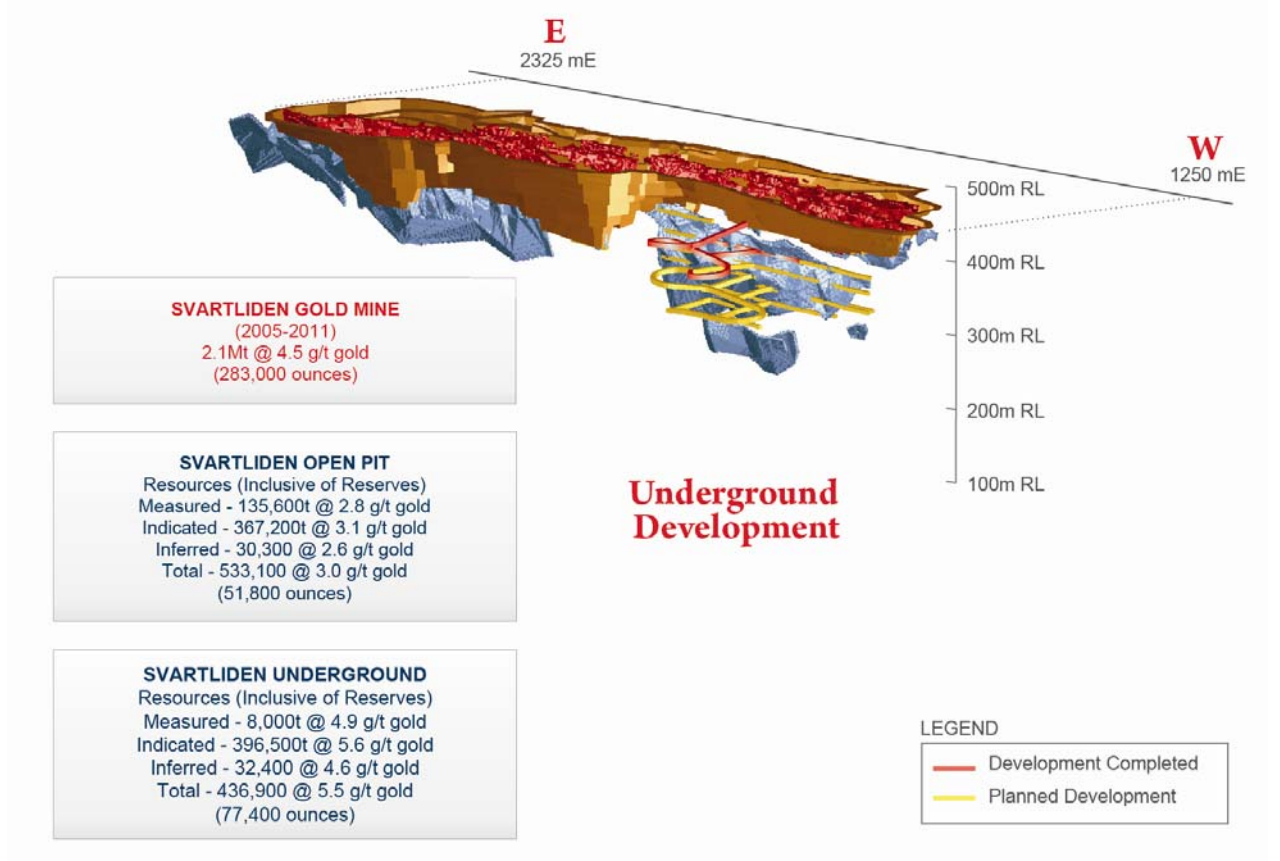

In February the Company submitted to the Land and Environmental Court of Sweden supplementary material for the new environmental permit application. The Company is waiting for a hearing date to be set by the Court.

Underground Development

The decline advanced 260m for the quarter and has advanced 758m in total. The decline is on schedule and within budget.

Mining of development ore from the 345m level commenced with 28,782 tonnes at an average grade of 3.4 g/t gold being mined.

Svartliden Gold Mine - Underground Development

FINLAND

Vammala Production Centre

Table 2 – Production Summary

	Ore Mined (t)	Ore Milled (t)	Head Grade (g/t)	Recovery (%)	Plant Utilisation (%)	Total Gold Production (Ounces)	Cash Cost US/oz
Mar 2012 Quarter	78,664	71,676	3.8	72.6	86.9	6,351	1,252
Dec 2011 Quarter	59,826	62,433	3.0	78.4	83.6	5,044	1,304

Two lost time injuries occurred during the quarter both caused by minor accidents.

Production at Vammala was 6,351 ounces of gold from 71,676 tonnes of ore milled at a head grade of 3.8 g/t gold and an average cash cost of US\$1,252 per ounce (including refining costs of US\$256 per ounce). 8 days of production was lost due to mechanical failures in the mill.

37,810 tonnes of ore was milled from Orivesi at 3.6 g/t and 33,866 tonnes at 4.1 g/t gold was milled from Jokisivu.

Overall recoveries were lower during the quarter as high sulphide ore from Orivesi was processed without using xanthate to assure a saleable product was produced.

Orivesi Gold Mine

23,955 tonnes of ore was mined from the Sarvisuo ore lodes at an average grade of 4.2 g/t gold, 5,816 tonnes was extracted from pillars in the Kutema area at the 550m and 645m levels at an average grade of 2.8 g/t gold and 11,883 tonnes mined from Kutema Deeps (development ore) at an average grade of 4.6 g/t gold.

Orivesi Gold Mine

The extension of the Kutema decline from the 720m level which commenced in January 2011 advanced 234m in the quarter (920m in total) reaching the 850m level by the end of March. Lateral development of 374m for the quarter (1,164m in total) advanced on the 740, 760, 780, 800, 820 and 840m levels. Development drives have extended to ore on all levels between 720m and 800m resulting in 11,883 tonnes of development ore being mined at an average grade of 4.6 g/t gold.

Jokisivu Gold Mine

Jokisivu Gold Mine

23,670 tonnes of development ore at an average grade of 3.4 g/t gold was mined from Kujankallio underground and 12,740 tonnes at an average grade of 3.0 g/t gold was mined from the Kujankallio open pit extension. Mining of the Kujankallia open pit extension was completed in February.

Mining of stopes at the 145m and 85m levels continued. The first stoping ore was processed in January with 3,849 tonnes at an average grade of 3.1 g/t gold processed. Lateral development continued on the other four levels.

9,566 tonnes of development ore at a grade of 3.9 g/t gold and 20,451 tonnes of Jokisivu open pit ore at a grade of 3.3 g/t gold were also processed during the quarter.

Development of the decline advanced 242m in the quarter. The portal is located in the Kujankallio open pit, 35m below surface and since commencement in September 2009, the decline has advanced 1,378m or 210m in vertical depth.

EXPLORATION

SOUTHERN FINLAND

Orivesi Gold Mine

Drilling continued at Sarvisuo West with the completion of the final 14 holes (2,531.1 metres) of a 25 hole program that targeted extensions and in-filled areas of known mineralisation between the 640m and 720m levels. Results have been received from 23 holes, yielding promising intercepts of **6.15m @ 5.86 g/t gold**, **3.70m @ 92.48 g/t gold** and the previously released **3.00m @ 9.72 g/t gold** (Appendix 1).

The first 2 holes (455.4 metres) of a follow-up 16 hole (3,280 metre) program that is testing the Sarvisuo West area below the 720m level is in progress. Results are pending.

Preparation is underway to commence a program of drilling that will target the Kutema lode system between the 880m and 960m levels. The 17 hole, 3,100 metre program has been designed to improve confidence in the Kutema resource in readiness for mine planning, development and production. The program will commence immediately after drill stations are available in the Kutema decline extension.

Jokisivu Gold Mine

Final results were received for the third program of underground drilling, a 6 hole, 1,246.70 metre program undertaken from the 85m level that was drilled partially along strike and was directed towards the horsetail structures and planned production areas on the footwall side of the Kujankallio deposit. Better intercepts received include **10.00m @ 15.88 g/t gold** in drill hole HU/JS-469 (Appendix 2).

The drilling of a fourth program of underground drilling, an 18 hole (1,820.60 metres) in-fill campaign from the 145m level that targeted the Main Zone and footwall zones at Kujankallio was completed. Results have been received from 7 holes, returning a best intercept of **6.95m @ 6.72 g/t gold** (Appendix 3). The results from the remaining 11 holes are pending.

A fifth phase of underground drilling is now underway from the 200m level at Kujankallio, with 2 holes, 515.70 metres completed. The 14 hole, 3,335 metre in-fill program is targeting the Main Zone and the nearby hanging wall zones between the 185m and 245m levels. Results are pending.

The drilling of a 38 hole, 4,455 metre in-fill surface diamond core drill program at Arpola has commenced. The program has been designed to improve the confidence of the resource model in readiness for mine planning, development and production. By the end of the quarter, 18 holes, 2,611 metres had been completed. Results are pending.

NORTHERN FINLAND

Kuusamo Gold Project

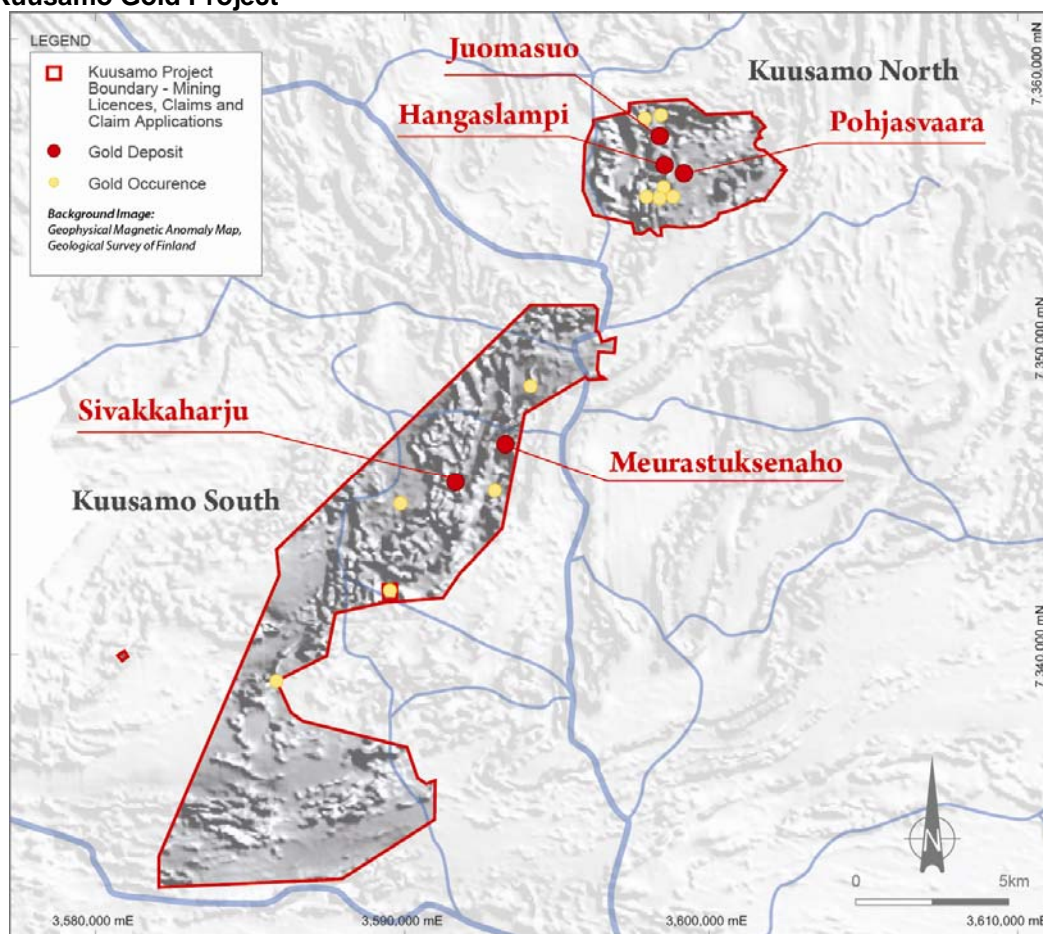

Drilling directed at the Juomasuo and Hangaslampi deposits continued with a further 22 holes completed for an advance of 5,752.40 metres.

The 19 holes, 5,382.80 metres drilled at Juomasuo represents portion of two campaigns, Phases 8 and 9, which are targeting the strike and depth extensions of known mineralisation in the southwest portion and, the main and eastern portion of the deposit, respectively. Two rigs are active on these campaigns, 10 holes remaining to complete the programs.

The 3 holes, 369.6 metres completed at Hangaslampi are the final holes in the fourth phase of drilling undertaken at this deposit.

Kuusamo Gold Project

The first results have been received from the Phase 8 program and include intercepts of **7.20m @ 8.76 g/t gold**, **4.80m @ 4.70 g/t gold** and **10.20m @ 9.53 g/t gold**. The results are from the initial 5 holes completed in the 15 hole Phase 8 program (Appendix 4).

These results are extremely encouraging occurring outside the current resource model, confirming that mineralisation extends below and along strike from the identified lodes at grades commensurate with the upper portions of the Juomasuo deposit.

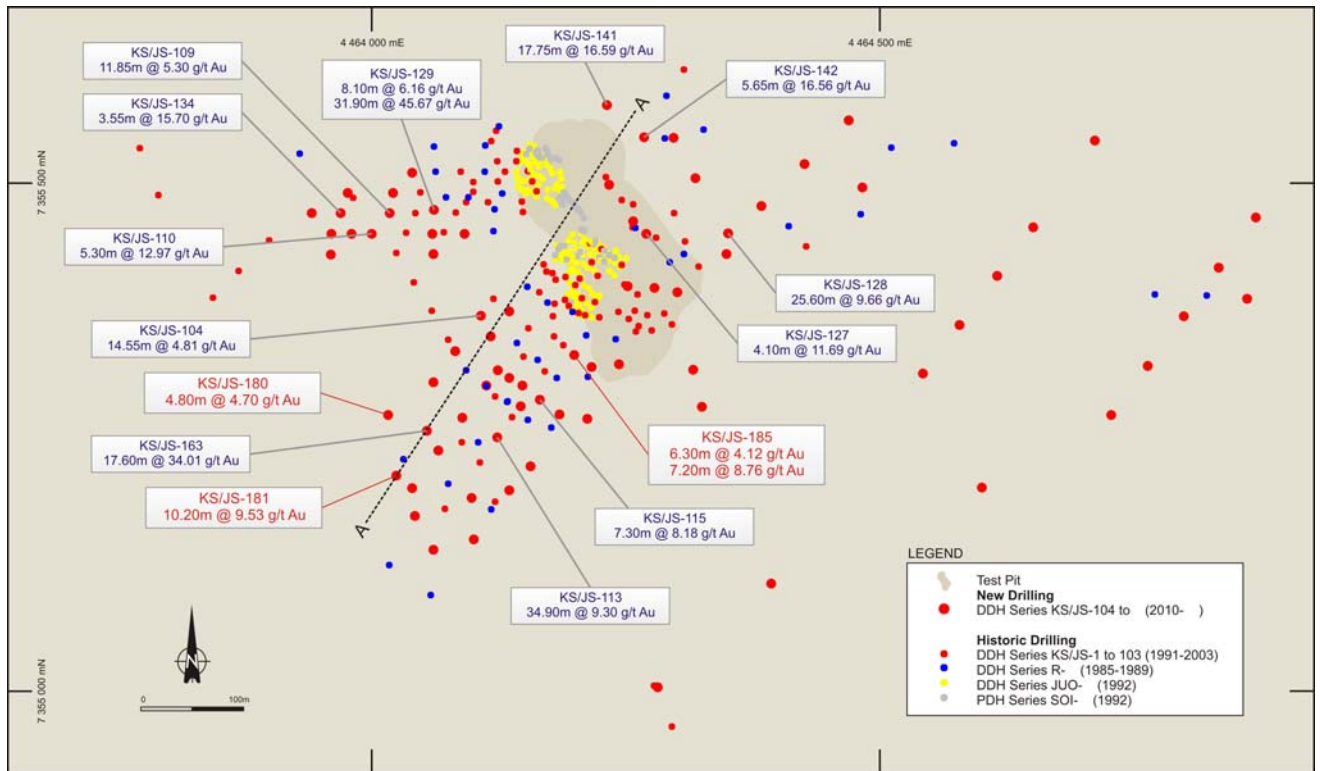

Final results were received for the Phase 7 drilling campaign at Juomasuo, a 1,588 metre, 7 hole program, which tested an area to the east of the main zone of mineralisation at Juomasuo, following-up historical gold intersections and testing a prominent geophysical anomaly.

Analysis has returned an intercept of **4.10m @ 6.64 g/t gold** in drill hole KS/JS-169 (Appendix 5). This intercept occurs approximately 40 metres below the intercept of 3.40m @ 3.20 g/t gold in the historic drill hole R-340 and highlights the possibility of a further steeply dipping gold bearing zone occurring, 100 metres east of the main lode set at Juomasuo.

Multi-element analysis has also highlighted the presence of elevated levels of rare earth elements and copper in this area. Better intercepts obtained include 78.00m @ 768 ppm TREO in drill hole KS/JS-172, 5.55m @ 2,211 ppm TREO in KS/JS-169 and 3.35m @ 4,533 ppm copper in KS/JS-175. Sporadic elevated levels of cobalt and uranium also occur.

Juomasuo drill hole location plan.

Juomasuo cross section A-A.

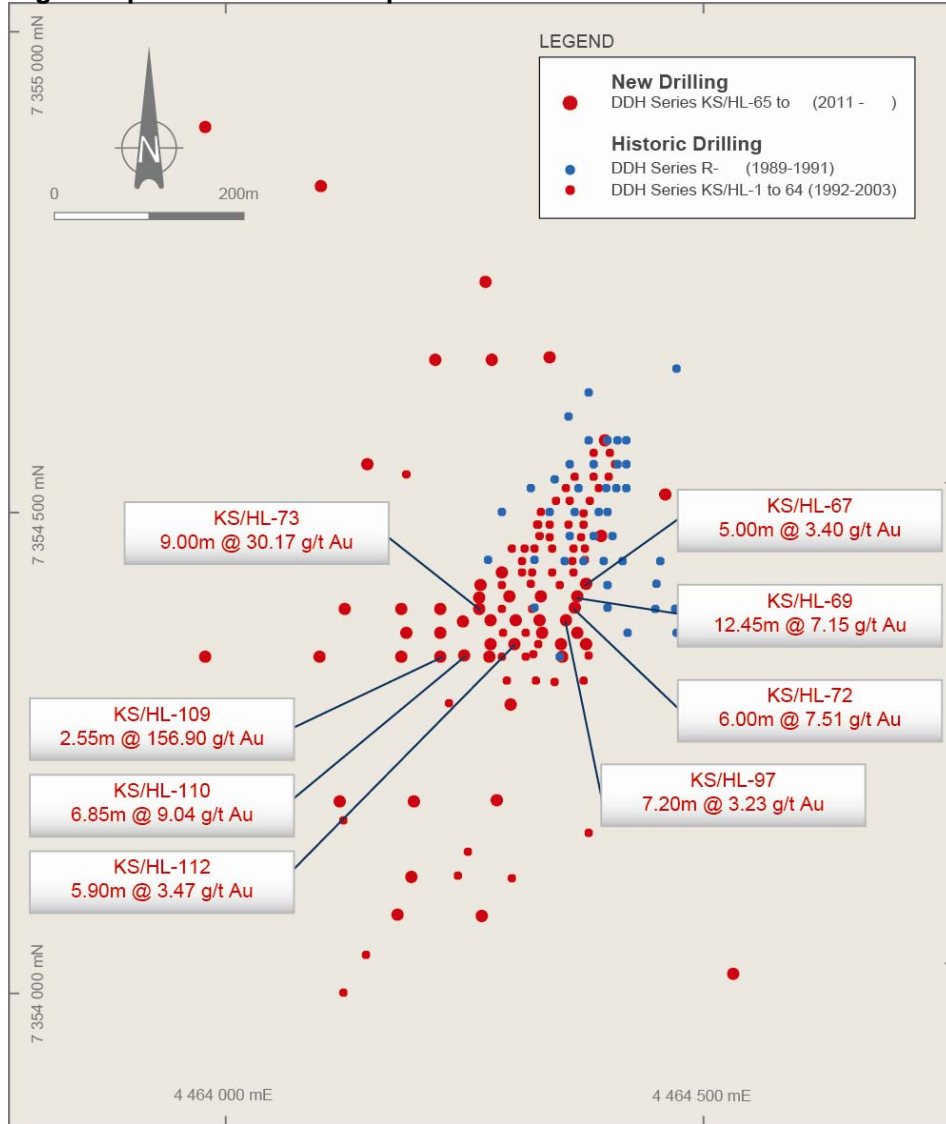

All results have now been received for the drilling completed at the Hangaslampi deposit. A total of 50 holes (6,231.3 metres) have been drilled at, and in the vicinity of the deposit since the recommencement of exploration, evaluating the strike and depth extensions and providing in-fill information to better define the extent and geometry of identified mineralisation, and to test identified geophysical and geochemical targets.

A number of promising intercepts have been received, including **2.55m @ 156.90 g/t gold**, **6.85m @ 9.04 g/t gold**, **5.90m @ 3.47 g/t gold**, **7.20m @ 3.23 g/t gold**, **5.00m @ 3.40 g/t gold**, **12.45m @ 7.15 g/t gold**, **6.00m @ 7.51 g/t gold** and **9.00m @ 30.17 g/t gold** (Appendix 6).

Hangaslampi drill hole location plan.

Assays have also been received from a 7 diamond core drill hole (1,023.30 metres) campaign undertaken at the Pohjasvaara deposit, yielding a best intercept of **3.45m @ 20.60 g/t gold** (Appendix 7).

The Pohjasvaara gold deposit is located 1,400 metres southeast of Juomasuo and represents a steeply dipping, medium to high grade body of gold mineralisation that remains open along strike and with depth. Thirty-seven holes (3,409 metres) were drilled at Pohjasvaara by the Geological Survey of Finland and Outokumpu Mining Oy between 1985 and 2002. This drilling returned a number of very encouraging intercepts including 11.20m @ 5.09 g/t gold, 4.80m @ 13.03 g/t gold, 4.00m @ 15.16 g/t gold, 7.00m @ 7.89 g/t gold, 20.40m @ 5.54 g/t gold, 11.00m @ 7.12 g/t gold, 2.80m @ 319.42 g/t gold, 4.00m @ 72.81 g/t gold and 6.00m @ 8.81 g/t gold.

A program of re-logging and re-assaying of historic drill core has recommenced, a further 21 holes logged. Assay results have now been received from 5 holes, returning gold values comparable with historic gold values.

Preparation to undertake a detailed airborne geophysical survey encompassing the 11,715 hectare core holding in the Kuusamo area commenced. Quotations have been received from international airborne geophysical contractors, with the view of completing the survey during the coming northern summer.

In conjunction with exploration activities independent consulting group, Ramboll Finland Oy has continued with the Environmental Impact Assessment (EIA). The EIA is an interactive process with the local people, municipality and associations and is supervised by a steering group, which comprises individuals representing various organisations and interested parties.

A major component of the EIA, the environmental baseline study that included investigations on ground and surface water, the nature and bird life, has been completed. Noise modelling, reindeer surveys and other community related tasks are nearing completion.

Finalisation of the EIA still requires information from metallurgical test work. Planning has advanced, with the test work due to commence with samples from the Juomasuo and Hangaslampi deposits dispatched to ALS-Ammtec laboratory in South Australia.

SWEDEN

Svartliden Gold Mine

Testing of the depth extensions of the Svartliden deposit continued, with 2,263.75 metres drilled, completing the Phase 15 and Phase 16 programs.

Svartliden Gold Mine – Target panels

All results have been received from the 9 hole, Phase 15 program, which was designed to test the downward extensions from 175 metres to 350 metres below surface, between Profiles 2050 and 2250 in the eastern portion of the deposit. Results were modest, intercepts received being narrow and low grade (Appendix 8).

Final results have also been received for the Phase 16 program, which was designed to extend and better define the lower lens of mineralisation in the western portion of the deposit. The program has returned a number of encouraging intercepts from the lower lens of **6.00m @ 4.22 g/t gold** and **5.00m @ 4.86 g/t gold** and from the north Lode of **15.00m @ 4.70 g/t gold**, **5.00m @ 4.80 g/t gold** and **4.00m @ 14.24 g/t gold** (Appendix 9).

A third phase of drilling commenced at the Far East target, a 5 hole, 3,275 metre program evaluating the depth and strike extensions of mineralisation identified during the previous drill program that confirmed the discovery of a new zone of gold mineralisation approximately 800 metres east of the Svartliden gold mine. Two holes of the Phase 3 program have been completed for an advance of 1,102.60 metres, both holes intersecting a geological sequence that is analogous with the host sequence at the Svartliden Gold Mine. Results are pending.

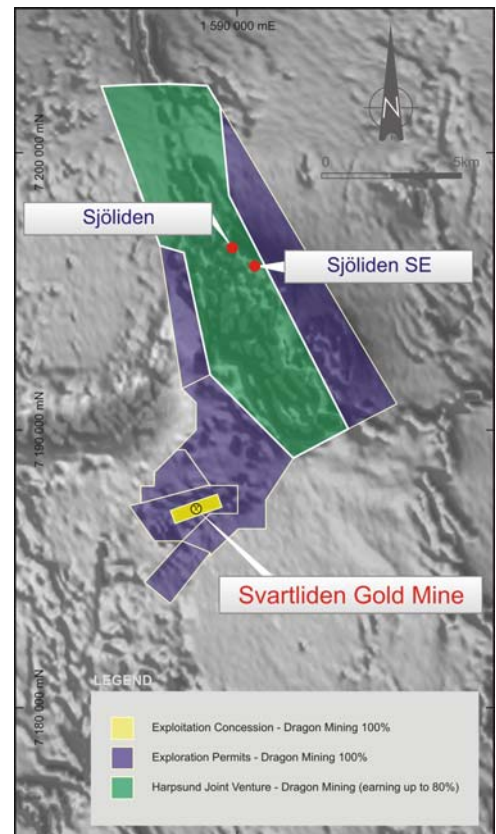

A program of reconnaissance drilling has also commenced in the Björkliden area approximately 3,500 metres northeast of the Svartliden gold mine, with the completion of the first hole in a 10 hole program. The Björkliden area is interpreted from geophysics to be the northerly extension of the Svartliden geological sequence. Results are pending.

Location of the near mine targets, Far East, Svartliden West and Björkliden.

Harpsund Joint Venture (Earning 80% interest)

An 18 hole, 1,128.65 metre program of drilling has been completed at the Sjölden and Sjölden SE target area, following-on from the successful campaign of drilling completed in 2011 that returned a number of promising intercepts including 2.0m @ 14.03 g/t gold. Logging of drill core is now underway, analytical results expected during the coming quarter.

The Harpsund Joint Venture area is located immediately adjacent to Dragon Mining’s Exploration Permit holding at Svartliden, and is situated 4 kilometres northeast of the Svartliden Gold Mine. The Company entered into a Joint Venture Agreement with listed Swedish exploration company Botnia Exploration AB (Botnia) to earn up to 80% in Botnia’s Exploration Permits in this area in late 2010.

Location of the Sjölden and Sjölden SE targets on the Harpsund Joint Venture.

RESOURCE AND RESERVE STATEMENTS

The Proven and Probable Ore Reserves for the Nordic gold projects have been updated as at 31 December 2011 to **1.58 million tonnes grading 3.5 g/t gold for 177,900 ounces** (Appendix 10). This represents a decrease from the 31 December 2010 Ore Reserve of 1.89 million tonnes grading 3.8 g/t gold for 231,030 ounces.

The gold resource inventory for Dragon Mining's Nordic gold projects continues to exceed 1 million ounces, following the updating of Mineral Resources for the Kujankallio and Sarvisuo deposits (Appendix 11). The updated total group resource of **7.83 million tonnes grading 4.7 g/t gold for 1,189,400 ounces**, depleted for mining to 31 December 2011 and inclusive of Ore Reserves represents an increase of 6% in contained ounces over the 31 December 2010 combined gold resource total of 6.69 million tonnes grading 5.2 g/t gold for 1,124,900 ounces.

INVESTMENTS

AUSTRALIA

Weld Range Metals Limited (Dragon 39.95%)

WRM continue to work constructively with the Wajarri Yamatji people to develop the valuable iron, chromium, nickel and PGM resources for all the people of the Geraldton region and WA.

Eritrea

Further to the sale of the 20% interest in the Zara Gold Project, Eritrea, Dragon Mining is entitled to payment of \$4.0 million from Chalice Gold Mines Limited on the delineation of a 1 million ounce gold Reserve at the Zara Gold Project. On 4 June 2010, Chalice announced a maiden gold Reserve at the Zara Gold Project of 760,000 ounces from an Indicated gold Resource of 840,000 ounces.

CORPORATE

Cash Balances and Movements

As at 31 March 2012, Dragon Mining held \$25.6m in cash, \$4.9m in bullion and net gold concentrate receivables and a \$4.1m cash deposit lodged with a Swedish authority as a rehabilitation bond.

The principal movements in the cash balance during the quarter were attributable to:

	Q1
Operating Cash flows	\$(m)
Net cash inflows from operations	5.0
Cash outflows for rehabilitation bonds, overhead and operational support costs	(0.7)
Exploration	(3.0)
Net operating cash flows	1.3
Investing Cash flows	
Development expenditure	(4.1)
Capital purchases	(1.0)
Other	(0.3)
Net investing cash flows	(5.4)
Financing Cash flows	
Issue of equity	14.4
Repayment on loan facility	(0.8)
Drawdown of gold concentrate factoring facility	0.2
Foreign exchange gains on cash balances held in foreign currency	(0.1)
Net financing cash flows	13.7
INCREASE IN CASH	9.6

An underwritten renounceable pro rata rights issue to shareholders was completed at an issue price of \$1.10 per share raising \$15.0 million before underwriting fees and expenses. The proceeds will be primarily used to advance exploration and metallurgical testwork at the Kuusamo Gold Project to enable feasibility studies and development to progress at a more rapid rate and for exploration on Kussamo regional prospects.

Gold Sales

8,080 ounces of gold production from Svartliden was sold at an average cash price of US\$1,606 per ounce. 2,350 ounces of gold were delivered into the gold hedge at an average forward price of US\$1,435 per ounce and 5,730 ounces of gold was delivered into spot at an average price of US\$1,675 per ounce.

6,202 ounces of gold concentrate from the Vammala Production Centre was sold at an average price of US\$1,516 (gross of refining costs). 5,400 ounces of gold were delivered into the gold hedge at an average forward price of US\$1,504 per ounce.

Listed Investments

Dragon Mining holds 2,000,000 shares in Chalice Gold Mines Limited with a market value of approximately \$0.5m.

Debt

A repayment of €0.6m was made on 3 January 2012 to the Nordea loan and the balance remaining at 31 March 2012 is €2.5m (A\$3.3m). A repayment of €0.6m was also made of 2 April 2012.

The variable interest rate is currently 4.5%, calculated quarterly in arrears.

Hedging

The Nordea loan was subject to the completion of a minimum euro denominated gold hedging programme of 30,000 ounces (10,000 ounces in 2011 and 20,000 ounces in 2012).

This hedging program was executed in May 2011 and the remaining gold hedge program is outlined in table 3.

Table 3 –EUR Denominated Gold Hedging Profile as at 31 March 2012

Delivery Date	Ounces	Gold Price – EUR
31/03/2012*	1,800	1,055
30/04/2012	1,800	1,056
31/05/2012	1,800	1,057
30/06/2012	2,000	1,058
31/07/2012	1,800	1,060
31/08/2012	1,800	1,047
30/09/2012	1,800	1,062
31/10/2012	1,800	1,063
30/11/2012	1,800	1,063
31/12/2012	1,800	1,064
Total	18,200	1,058

* Settlement date was 3 April 2012.

Using the 31 March 2012 spot gold price of €1,250 per ounce, the mark to market of the gold euro hedge was a negative amount of A\$4.4m.

The Company also has a residual gold hedge of 1,600 ounces at an average forward price of 9,013 SEK per ounce associated with the Svartliden Gold Mine which is due for delivery in April 2012.

Using the 31 March 2012 spot gold price of 11,031 SEK per ounce, the mark to market of the hedge was a negative amount of A\$0.5m.

Factoring

As there is a minimum six week delay between shipment of gold concentrate produced at the Vammala Production Centre and payment by the refiner, the Company has a receivables facility (factoring) with Nordea Bank in Finland. Dragon Mining can receive loan funds from Nordea for up to 75% of the gold concentrate value delivered and invoiced. At the end of March, A\$2.0m had been financed.

Appendix 1 – Results from the underground diamond core drilling program from the 710m level targeting the Sarvisuo West area at the Orivesi Gold Mine. March quarter results highlighted in red.

Preparation of half core samples was completed at the ALS Minerals facility in Outokumpu, Finland, and analysis completed at ALS Minerals in Rosia Montana, Romania, and Vancouver, Canada, using procedures Au-AA25, ME-4ACD81, ME-MS81. Gold values exceeding 3 g/t and uranium values exceeding 1,000 ppm were re-assayed by AU-GRA22 and U-XRF-10 methods, respectively. The Total REO values have been calculated as the sum of all REE as REE₂O₃, with the exception of Ce (CeO₂), Pr (Pr₆O₁₁) and Tb (Tb₄O₇). Intercepts reported at a 1 g/t gold cut-off.

Preparation of half core samples was completed at the ALS Minerals facility in Outokumpu, Finland, and analysis completed at ALS Minerals in Rosia Montana, Romania, and Vancouver, Canada, using procedures Au-AA25, ME-4ACD81, ME-MS81. Gold values exceeding 3 g/t and uranium values exceeding 1,000 ppm were re-assayed by AU-GRA22 and U-XRF-10 methods, respectively. The Total REO values have been calculated as the sum of all REE as REE₂O₃, with the exception of Ce (CeO₂), Pr (Pr₆O₁₁) and Tb (Tb₄O₇). Intercepts reported at a 1 g/t gold cut-off.

Appendix 7 – Drill results from diamond core drilling at the Pohjasvaara gold deposit, Kuusamo Gold Project.

- (1) Open pit Ore Reserves at Svartliden are based on a gold price of US\$1,650/ounce and reported at a 1.8 g/t gold cut-off. Ore loss was set at 17.2% and average dilution at 20% in accordance with historic mine reconciliation.
- (2) Underground Ore Reserves at Svartliden are based on a gold price of US\$1,650/ounce and reported at a 3.0 g/t gold cut-off. Average dilution was set at 84% for development and 66% for production.
- (3) Represents stockpiled material at the Svartliden mine site.
- (4) Ore Reserves at Kutema are based on a gold price of US\$1,600/ounce and reported at a 2.0 g/t gold cut-off. Dilution levels range from 0% to 30%. Ore loss was set at 20% for the mining of pillar material.
- (5) Ore Reserves at Sarvisuo are based on a gold price of US\$1,600/ounce and reported at a 2.0 g/t gold cut-off. Dilution levels range from 10% to 15%.
- (6) Open pit Ore Reserves at Kujankallio are based on a gold price of US\$1,600/ounce and reported at a 2.0 g/t gold cut-off. Average dilution was set at 45% and ore loss at 10% in accordance with historic mine reconciliation from open pit operations at Jokisivu.
- (7) Underground Ore Reserves at Kujankallio are based on a gold price of US\$1,600/ounce and reported at a 2.0 g/t gold cut-off. Average dilution was set at 50% for development and 30% for production and ore loss was set at 5% for development and 8% for production.

(8-10) The Svartliden Mineral Resource was completed internally and audited by independent consultants Runge Limited in July 2011 for the open pit and underground portions of the Mineral Resource. Ordinary Kriging grade interpolation was constrained by resource outlines using a nominal 1 g/t gold cut-off and a minimum down hole length of 2 metres. A high grade cut of 60 g/t gold was applied to the underground resource and 30 g/t gold for the open pit resource. Resource incorporates available drill data at 31 March 2011 and has been depleted for mining as at 31 December 2011. Open pit resource reported at a cut-off grade of 1.3 g/t gold and the underground resource at 3 g/t gold.

(11) The Kutema Mineral Resource was completed by independent consultants Resource Evaluations Pty Ltd in 2007 using Inverse Distance to Power 2 grade interpolation constrained by resource outlines using a nominal 1 g/t gold cut-off and minimum 2 metre down hole length. High grade cuts of 80 g/t and 110 g/t gold were applied to mineralised objects. Reported at a cut-off grade of 3 g/t gold.

(12) The Sarvisuo Mineral Resource was undertaken internally and audited by independent consultants Runge Limited in January 2012. Inverse Distance to Power 2 grade interpolation constrained by resource outlines using a nominal 0.6 to 1.0 g/t gold cut-off and using a minimum 2 metre down hole length. A high grade cut of 70 g/t gold was applied to mineralised objects. Reported at a cut-off grade of 2 g/t gold.

(13) The Kujankallio Mineral Resource was completed by Runge Limited in January 2012 using Inverse Distance to Power 2 grade interpolation constrained by outlines based on a nominal 0.1 to 0.5 g/t gold cut-off and no minimum down hole length due to the pinch and swell nature of the deposit. High grade cuts of 75 to 105 g/t gold were applied where appropriate. Reported at a 2 g/t gold cut-off.

(14) The Arpolo Mineral Resource was completed by Runge Limited in January 2011 using Inverse Distance to Power 2 grade interpolation constrained by outlines based on a nominal 0.1 to 0.5 g/t gold cut-off and no minimum down hole length due to the pinch and swell nature of the deposit. A high grade cut of 70 g/t gold was utilised for all mineralised objects. Resource has been depleted for mining as at 31 December 2011. Reported at a 2 g/t gold cut-off.

(15-16) The Kaapelinkulma Mineral Resources were completed by independent consultants Runge Limited in October 2010 using Inverse Distance to Power 2 grade interpolation constrained by resource outlines using a nominal 0.5 g/t gold cut-off and minimum 2 metre down hole length. High grade cuts of 50 g/t and 20 g/t gold were applied to the Southern and Northern areas, respectively. Reported at a cut-off grade of 1 g/t gold.

(17) The Juomasuo Mineral Resource was completed by independent consultants Runge Limited in November 2011 using Ordinary Kriging grade interpolation constrained by resource outlines using a nominal 0.5 g/t gold cut-off and minimum 2 metre down hole length. High grade cuts of 120 g/t and 130 g/t gold were applied to the main zones of mineralisation. The remaining zones were assigned a high grade cut of 50 g/t gold. Reported at a cut-off grade of 1 g/t gold.

(18) The Hangaslampi Mineral Resource (Gold) was completed by independent consultants Runge Limited in January 2011 using Ordinary Kriging grade interpolation constrained by resource outlines using a nominal 0.5 g/t gold cut-off and minimum 2 metre down hole length. A high grade cut of 70 g/t gold was applied to all objects. Reported at a cut-off grade of 1 g/t gold.

(19) The Pohjasvaara Mineral Resource (Gold) was completed by independent consultants Runge Limited in January 2011 using Ordinary Kriging grade interpolation constrained by resource outlines using a nominal 0.5 g/t gold cut-off and minimum 2 metre down hole length. A high grade cut of 30 g/t gold was applied to all objects. Reported at a cut-off grade of 1 g/t gold.

(20) The Meurastuksenaho Mineral Resource (Gold) was completed by independent consultants Runge Limited in January 2011 using Ordinary Kriging grade interpolation constrained by resource outlines using a nominal 0.5 g/t gold cut-off combined with a nominal 500ppm cobalt cut-off and minimum 2 metre down hole length. A high grade cut of 37 g/t gold was applied to all objects. Reported at a cut-off grade of 1 g/t gold.

(21) The Sivakkaharju Mineral Resource (Gold) was completed by independent consultants Runge Limited in January 2011 using Inverse Distance to Power 2 grade interpolation constrained by resource outlines using a nominal 0.5 g/t gold cut-off and minimum 2 metre down hole length. No high grade cuts were applied. Reported at a cut-off grade of 1 g/t gold.

Notations:

(1-7, 10)	<i>The information in this report that relates to Mineral Resources and Ore Reserves is based on information compiled by Mr Neale Edwards BSc (Hons), a Fellow of the Australian Institute of Geoscientists, who is a full time employee of the company and has sufficient experience which is relevant to the style of mineralization and type of deposit under consideration and to the activity which he is undertaking to qualify as Competent Person as defined in the 2004 Edition of the Australasian Code of Reporting for Exploration Results, Mineral Resources and Ore Reserves. Mr Neale Edwards consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.</i>
(8-9, 13, 17)	<i>The information in this report that relates to Mineral Resources is based on information compiled by Mr Craig Allison, a Member of the Australasian Institute of Mining and Metallurgy, who is a full time employee of Runge Limited and has sufficient experience which is relevant to the style of mineralization and type of deposit under consideration and to the activity which he is undertaking to qualify as Competent Person as defined in the 2004 Edition of the Australasian Code of Reporting for Exploration Results, Mineral Resources and Ore Reserves. Mr Craig Allison consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.</i>
(11-12, 14, 18-21)	<i>The information in this report that relates to Mineral Resources is based on information compiled by Mr Aaron Green BSc (Hons), a Member of the Australian Institute of Geoscientists, who is a full time employee of Runge Limited and has sufficient experience which is relevant to the style of mineralization and type of deposit under consideration and to the activity which he is undertaking to qualify as Competent Person as defined in the 2004 Edition of the Australasian Code of Reporting for Exploration Results, Mineral Resources and Ore Reserves. Mr. Aaron Green consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.</i>
(15-16)	<i>The information in this report that relates to Mineral Resources is based on information compiled by Mr Aaron Green BSc (Hons), a Member of the Australian Institute of Geoscientists, who was a full time employee of Resource Evaluations Pty Ltd and has sufficient experience which is relevant to the style of mineralization and type of deposit under consideration and to the activity which he is undertaking to qualify as Competent Person as defined in the 2004 Edition of the Australasian Code of Reporting for Exploration Results, Mineral Resources and Ore Reserves. Mr. Aaron Green consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.</i>
(11, 14, 18-21)	<i>The information in this report that relates to Mineral Resources is based on information compiled by Mr Neale Edwards BSc (Hons), a Fellow of the Australian Institute of Geoscientists and Mr Matti Talikka MSc (Geology), a Member of the Australasian Institute of Mining and Metallurgy, who are full time employees of the company and have sufficient experience which is relevant to the style of mineralization and type of deposit under consideration and to the activity which they are undertaking to qualify as Competent Persons as defined in the 2004 Edition of the Australasian Code of Reporting for Exploration Results, Mineral Resources and Ore Reserves.
